HY2-LN
EXTERNAL GEAR PUMPS
GROUP 2
LOW NOISE
From 4.5 to 31.7 cc/rev
Up to 260 bar
Hydco is pleased to introduce a brand new range of low noise gear pumps. Based on the experience and knowledge acquired over many years of engineering and manufacturing, the HY-LN Series is provided with an aluminium alloy housing, two gear wheels with inclined teeth supported by sleeve bearings and cast iron flange and cover. The HY-LN series, available as pumps and motors, offers high efficiency, low noise level and can be applied in standard and heavy duty application, thanks to the high reliability and the accuracy of design and production. The pumps can be supplied as single, or as multiple units with a huge variety of options on flanges, shafts and ports, providing the right setup on each application. Feel free to contact your Hydco representative to find out more and to get proper support in your selection.

**Displacements**

From 4.5 cm³/rev to 31.7 cm³/rev  
From 0.27 in³/rev to 1.93 in³/rev

**Pressures**

Max continuous 260 bar (3770 psi)  
Max intermittent 290 bar (4200 psi)  
Max peak 310 bar (4500 psi)

**Max Speed**

4000 rpm

**Components**

1 - Cast Iron Flange  
2 - Gaskets  
3 - Gears  
4 - Bushings  
5 - Shaft Seal  
6 - Aluminium Alloy Body  
7 - Cast Iron Cover

**P/N**  
H200SP004C  
P = Pump or Motor  
PUMP C11-E20T2  
S/N  
C21 1544

**Serial number**  
C21 1544  
Arrow  
QR Code

**Abbreviate model code**  
Eg. pump 11.2 cc - European Standard Clockwise

**Made in Italy**

**HYDRECO**

**Contact**

Feel free to contact your Hydco representative to find out more and to get proper support in your selection.
The HY2-LN Series thanks to gears with inclined teeth offer a reduction of pulsations:

![HY2 - Standard Series Graph](image1)

![HY2 - LN Series Graph](image2)

Also the HY2-LN gear pumps offer a noise level reduction from 2 to 8 dB(A), compared with the standard gear pumps.

Test:
- Pump displacement \(14.6 \text{ cc} = 0.89 \text{ (in}^3/\text{rev)}\)
- Rotation speed 1800 r.p.m.
ORDERING CODE IDENTIFICATION FOR SINGLE PUMPS

Example
HY-PLNA2-C08-E20T2-FE2/2S-1NS
ORDERING CODE IDENTIFICATION FOR MULTIPLE PUMPS

Example:
**TANDEM** PUMP: HY-PLNA2-C08-E20T2-FE2/2S-1NS + LNA2-06-FE2/2S-1N

**TRIPLE** PUMP: HY-PLNA2-C08-E20T2-FE2/2S-1NS + LNA2-06-FE2/2S-1N + LNA2-06-FE2/2S-1N

</tbody>
</table>

The data in the table refer to unidirectional pumps and motors. The maximum pressures of reversible pumps and motors are 15% lower than unidirectional ones.

For different working conditions please contact Hydreo technical support.

GENERAL CHARACTERISTICS

**ROTATION DIRECTION**

- Clockwise Rotation
- Anti-clockwise Rotation
- Reversible Rotation

**DEFINITION OF PRESSURES**

- \( p_1 \): Max continuous pressure
- \( p_2 \): Max intermittent pressure
- \( p_3 \): Max peak pressure

\[ p \text{ (bar)} = \text{Max 20 sec} \]
\[ p \text{ (psi)} = \text{Max 8 sec} \]
GENERAL CHARACTERISTICS

It is essential that pumps are installed so that they can always fill with fluid. ‘HY’ Series pumps inlet porting is designed to facilitate full volume fill but the following machine design recommendations should be followed.

Direction of rotation (Viewed from shaft end) Clockwise (C) – Anticlockwise (A) – Reversible (R)

Range inlet pressure – pump 0.7 ÷ 3 bar (10 ÷ 43 psi)

Max back pressure on the unidirectional motors and reversible with internal drainage
- $P_1$ (continue) max 5 bar (72 psi)
- $P_2$ (for 20 sec) max 8 bar (115 psi)
- $P_3$ (for 5 sec) max 15 bar (215 psi)

Reversible Motor Max pressure in drain 5 bar

Temperature fluid (MIN, MAX, PEAK) °C
- -25, 80, 100 NBR
- -25, 110, 125 VITON

Range of viscosity From 10 to 100 mm²/s (cSt) IDEAL
Up to 750 mm²/s (cSt) RECOMMENDED
Up to 1000 mm²/s (cSt) START

Fluid type Mineral oil

RECOMMENDED FILTRATION

</tr>
</tbody>
</table>
**DETERMINATION OF A PUMP**

\[
Q_{\text{theor}} = \frac{V \times n}{1000} \text{ (l/min)} \\
M_{\text{real}} = \frac{M_{\text{theor}}}{\eta_{\text{hm}}} \text{ (Nm)} \\
P_{\text{OUT}} = \frac{\Delta p \times Q}{600} \text{ (kW)}
\]

**DETERMINATION OF A MOTOR**

\[
Q_{\text{real}} = Q_{\text{theor}} \times \eta_{v} \\
M_{\text{real}} = M_{\text{theor}} \times \eta_{\text{hm}} \\
P_{\text{IN}} = \frac{P_{\text{OUT}}}{\eta_{t}}
\]

**PUMP SELECTION**

Curves at 40°C - fluid viscosity 46 mm²/sec

**Example**

Working conditions:
Pump 8.2cc
Speed 2000 r.p.m.
Pressure: 150 bar [2170 psi]
Motor: 5.3 kW

OUTPUT FLOWS are theoretical. Generally volumetric efficiencies are in excess of 95%.
Please contact your Hydreco representative for specific working conditions.

INPUT POWERS are theoretical taking into account average efficiencies.

**NOTE:**

Diagrams provide approximate selection data
MOTOR SELECTION
Curves at 40°C – fluid viscosity 46 mm²/sec - 2000 r.p.m.

Example
Working conditions:
Torque needed: 16 Nm
Available flow 20 litre/min
Necessary motor: 8 (8.2 cc)
Pressure working: 105 bar
Speed: 1720 rev/min

NOTE:
Diagrams provide approximate selection data

MOTOR SELECTION
Curves at 40°C – fluid viscosity 46 mm²/sec - 1500 r.p.m.

Example
Working conditions:
Torque needed: 35 Nm
Available flow 35 litre/min
Necessary motor: 22 (22 cc)
Pressure working: 105 bar
Speed: 1550 rev/min

NOTE:
Diagrams provide approximate selection data

Reduced inlets provide overall systems savings by reducing the cost of redundant inlet hose and fittings.

For the correct choice or other combinations please contact Hydreco technical support.

**NOTE:** multiple pumps with common inlet will be provided with a special body.

**DIMENSIONS (side view)**

The HY2-LN intermediate pumps include the intermediate flange and coupling to easily assemble tandem or multiple pumps.

### ORDERING CODE IDENTIFICATION FOR ISOLATED INTERMEDIATE PUMPS

- **L** - Low noise
- **N** - NBR (standard)
- **A** - Aluminium
- **C** - cast iron
- **2** - Group 2

#### Sense of Rotation
- **C** - Clockwise (standard)
- **A** - Anti-clockwise
- **R** - Reversible

#### Displacement
- **04** = 4.5 cm³/rev (0.27 in³/rev)
- **06** = 6.5 cm³/rev (0.4 in³/rev)
- **08** = 8.2 cm³/rev (0.5 in³/rev)
- **11** = 11.3 cm³/rev (0.67 in³/rev)
- **14** = 14.6 cm³/rev (0.89 in³/rev)
- **16** = 16.9 cm³/rev (1.03 in³/rev)
- **20** = 20.1 cm³/rev (1.23 in³/rev)
- **22** = 22 cm³/rev (1.34 in³/rev)
- **25** = 25.2 cm³/rev (1.54 in³/rev)
- **28** = 28.2 cm³/rev (1.72 in³/rev)
- **31** = 31.7 cm³/rev (1.93 in³/rev)

#### Hydraulic ports position
- **S** - Side
- **R** - Rear

- **IN/OUT** (see pages 12 & 13)

Example

LNA2–C06–FE2/2S–1N
HOW TO MAKE TANDEM PUMPS USING AN INTERMEDIATE PUMP (side view)

A. Loosen, and remove, the clamp screws and remove the cover.

B. Connect the intermediate pump

C. Assembling the tandem pump.
   Refit the clamp screws.
   SCREWS TIGHTENING TORQUE = 60±2Nm
   For length of closure screws = see page 15
UNITS ROTATING CHANGING INSTRUCTIONS

A. Clean the pump externally with care

B. Coat the sharp edges of the drive shaft (2) with adhesive tape and smear a layer of clean grease on the shaft and extension to avoid damaging the lip of the shaft seal when removing the mounting flange.

C. Lay the pump on the working area in order to have the mounting flange turned upside.

D. Loosen, and remove, the clamp screws (1).

E. Remove the mounting flange (3), taking care to keep the flange as straight as possible during removal.

F. Ensure that while removing the front mounting flange, the drive shaft and other components remain in position.

G. Ease the drive gear (2) up to facilitate removal of bearings (4), taking care that the precision ground surfaces do not become damaged, and removed the drive gear.

H. Remove the driven gear (2) without overturning. The rear flange has not to be removed.

I. Re-locate the driven gear in the position previously occupied by the drive gear (2).

J. Re-locate the drive gear (2) in the position previously occupied by the driven gear (5).

K. Re-locate the bushing (4) without rotating. Refit the front mounting flange (3) turned by 180°.

L. Refit the clamp screws (1). SCREW TIGHTENING TORQUE = 60±2Nm

M. Check that the pump rotates freely when the drive shaft (2) is turned by hand.

N. If not a pressure plate seal may be pinched.

O. The pump is ready for installation with the new direction of rotation.
**HY-LN Series - Valves Options**

**Anticavitation Valve (AV)**

**Internal Drain (ID)**

**Relief Valve with External Drain (adjustable setting)**

**REV**

**Relief Valve with Internal Drain (adjustable setting)**

**RIV**

**Ordering example (add at the end of the pump or motor code): RIVB**
